

Break free from Lotus Notes

Notes to Blueprint™ is how you level up from legacy to AI-driven transformation.

For enterprise IT leaders, the once-reliable Lotus Notes and Domino environment now represents a major source of operational lag and a barrier to agility.

The architectural constraints and rising maintenance costs associated with this legacy platform are no longer sustainable. This creates a critical need for a modern approach to unlock the valuable data and processes trapped within the dungeon of these aging applications.

Pega gives you comprehensive visibility into your Notes estate to accelerate modernization projects so you can leave the risk, maintenance, and frustration of Notes behind.

Gain unparalleled visibility into your Notes estate

Notes to Blueprint™ eliminates the guesswork with portfolio analysis, uncovering scale, activity, and utility of your applications.

Reimagine workflows with embedded best practices

Pega Blueprint™ moves you from analysis to action by synthesizing AI best practices, surfacing workflows buried in your Notes apps and generating optimized, future-state designs – in a collaborative, low-code environment built for speed.

Automate with future-proof agentic workflows

Pega Infinity™ is the enterprise-ready predictable AI platform. Rapidly deploy your reimagined, cloud-ready, data-enabled workflows on Pega.

Notes to Blueprint™

Analyze

Uncover size, activity, and utility of your entire Notes estate.

Migrate

Free data from IBM Domino to the cloud.

Reimagine your first application

To get started, try out Pega Blueprint™ today to start reimagining agentic workflows in the cloud.
