Rabobank's Smart Investigate - Journey
to the Pega Cloud

Pega SI at Rabobank

The Realm of Pega Cloud
in Rabobank Payments

Rabobank

Our story

1895 - Several banks were set up in different parts of the Netherlands based on the Raiffeisen system. This organizational model was based on self-help, taking individual and mutual responsibility, and the involvement of all stakeholders.

1910 – 600 banks 1920 – 1100 banks

1960 – almost every household has a bank account

Banking changed: Personal loans and Mortgages of private customers.

To support the many banks in 1972 Raiffeisen bank and the Boerenleenbank merged into Rabobank

Today we are still committed to these same principles, and to making a difference in society.

*Improving future
agriculture and
horticulture*

*Promoting self-
sufficiency*

*Taking individual and
mutual responsibility*

*Involving
all stakeholders*

Process
Overview

Payments
Landscape

Pega SI in the Payments domain

Processes

Payment Investigation application consists of below high level processes

Investigations - WorldPay

- Unable to Apply
- Cancellation request
- Beneficiary Claims Non-Receipt
- Amendment Request
- Return of Funds (CT)
- Bank to Bank
- Blanco
- Miscellaneous

Investigations - SEPA

- Unable to Apply
- Cancellation request
- Beneficiary Claims Non-Receipt
- Amendment Request
- Return of Funds (CT)
- Bank to Bank
- Blanco
- Miscellaneous

Investigations - Cash

- Sealbag

Investigations – Direct Debit

- SEPA Direct debit On hold

Value Transfer - Savings

- Incoming Value Transfer
- Outgoing Value Transfer

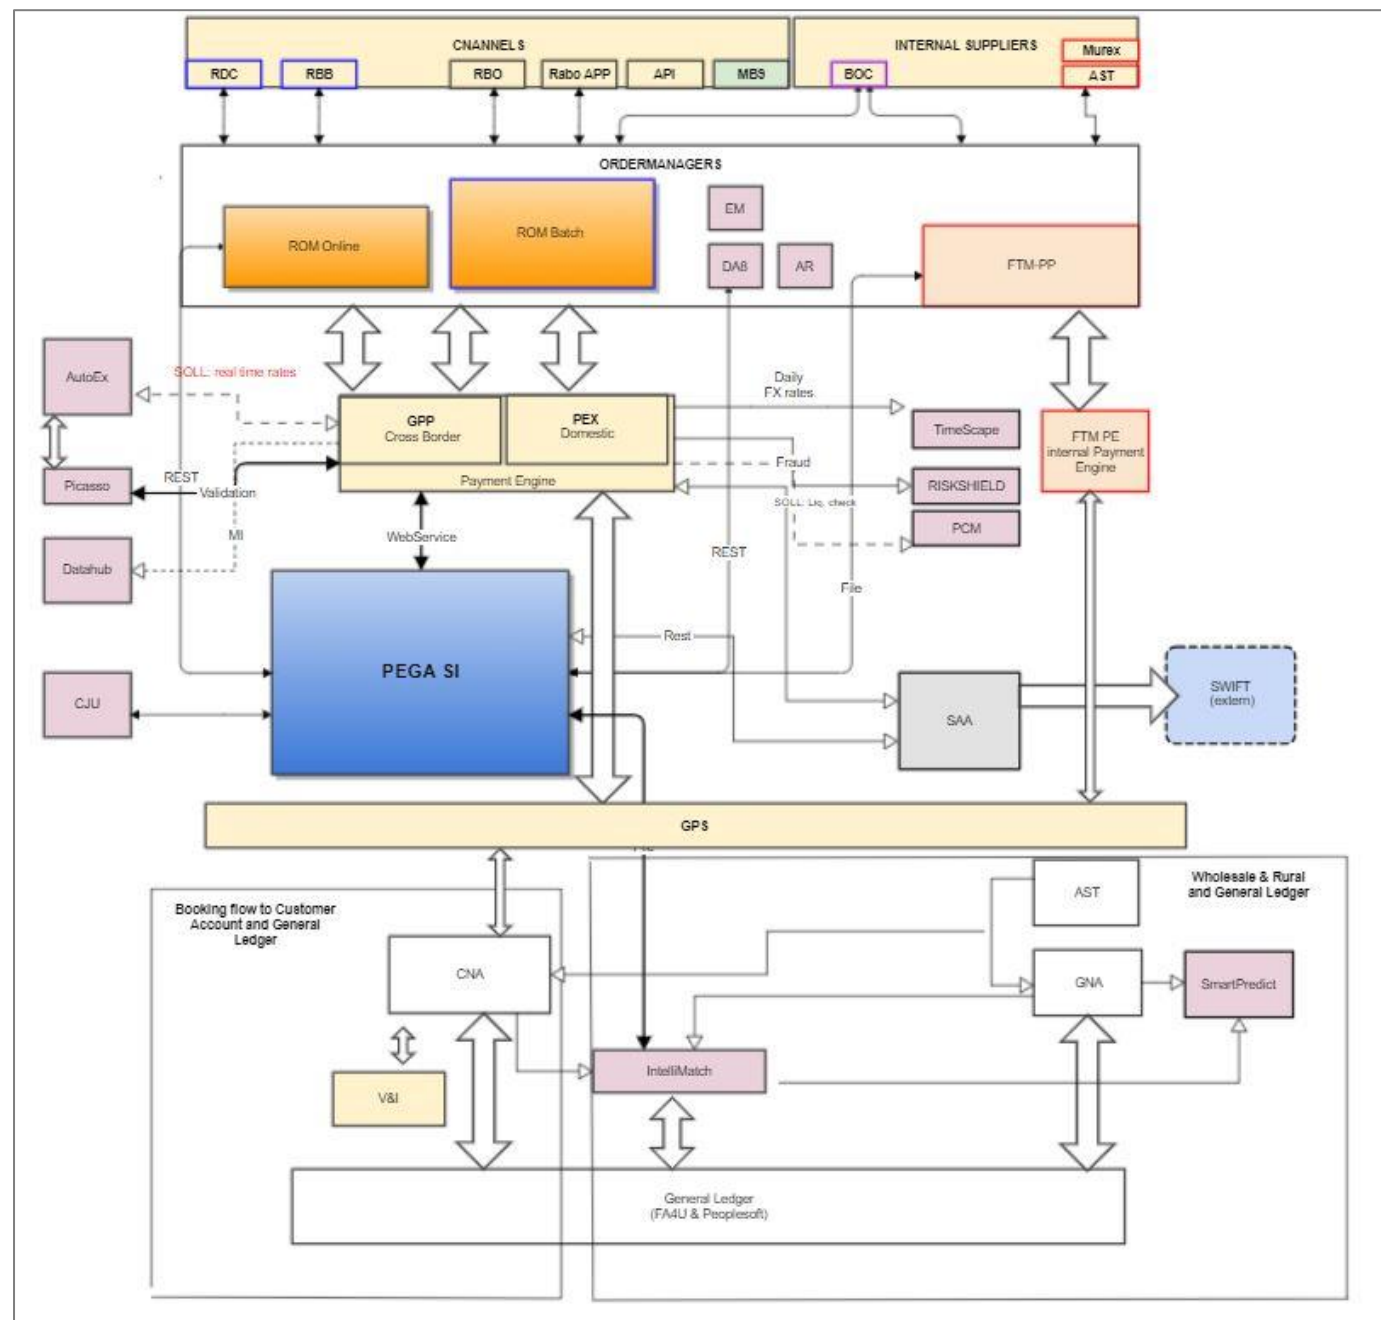

Reconciliation – Nostro

- Nostro Account
- Internal Account

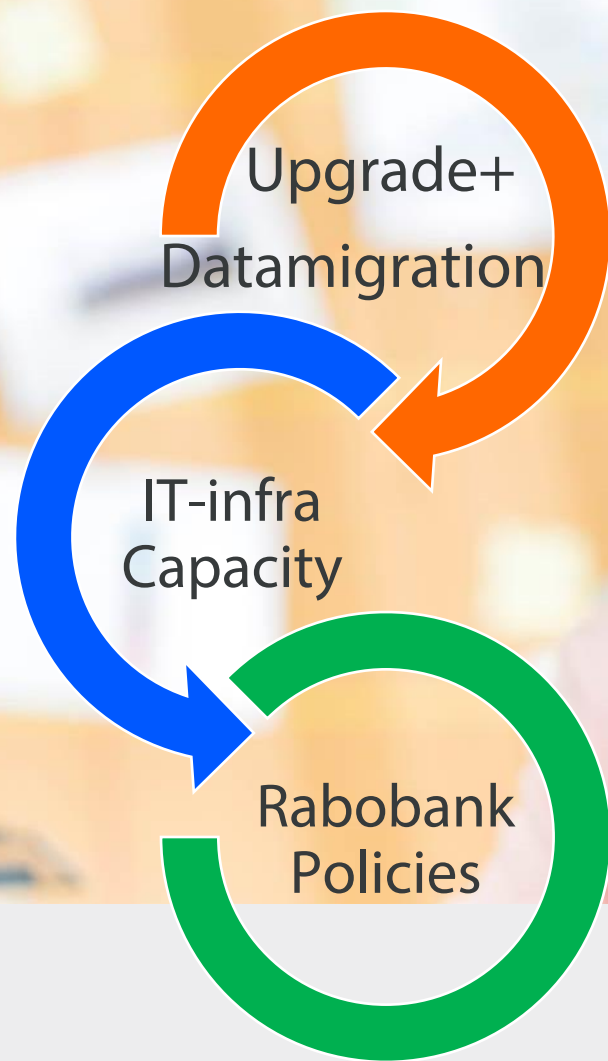

Pega SI in Payments Landscape

Pega SI application existence in the Payments landscape – An AIC 232 application

- Connected with various Order Manager apps
- Payment execution apps
- Swift externally
- Wholesale and General Ledger for reconciliation processes
- Foreign Exchanges
- Front Office Siebel application through a number of api to perform client communications

Pega Cloud Partnership

Rabobank Policies

- Buy over build
- Cloud First
- SaaS over PaaS

Known

- Knowledgebase in Rabobank
- Sharing of components
- Datamigration by Pega

Live Cycle Management

- Infrastructure
- Security
- Monitoring
- Product upgrades

Pega Cloud Partnership

Road to Go live

Risk Factors “Go live”

AIC 232 Application

- High value transactions
- No downtime during office hours
- Highly secured access control
- Secure connections
- Signed messaging (anti-tampering)

Posibility of fased Go live

- 90% of Processes need historical data which means Datamigration
- 33 interfaces

Pega Cloud Live – At a glance

Assessment and Readiness

Platform, Application and Database assessment

Cloud compatibility

Assess the size & scope

Modernization

Upgrade Interface

Unsupported integrations

Design new integration patterns

Derisk implementation through on prem

Ex: Event Bus, Funnel

Rule Migration

Business as usual on prem

Rule upgrade and migration plan

Tracking and retrofit

Data Migration & Shadowrun

Involving Lead architects in setup design

VPN tunnel, OCM, IP whitelist

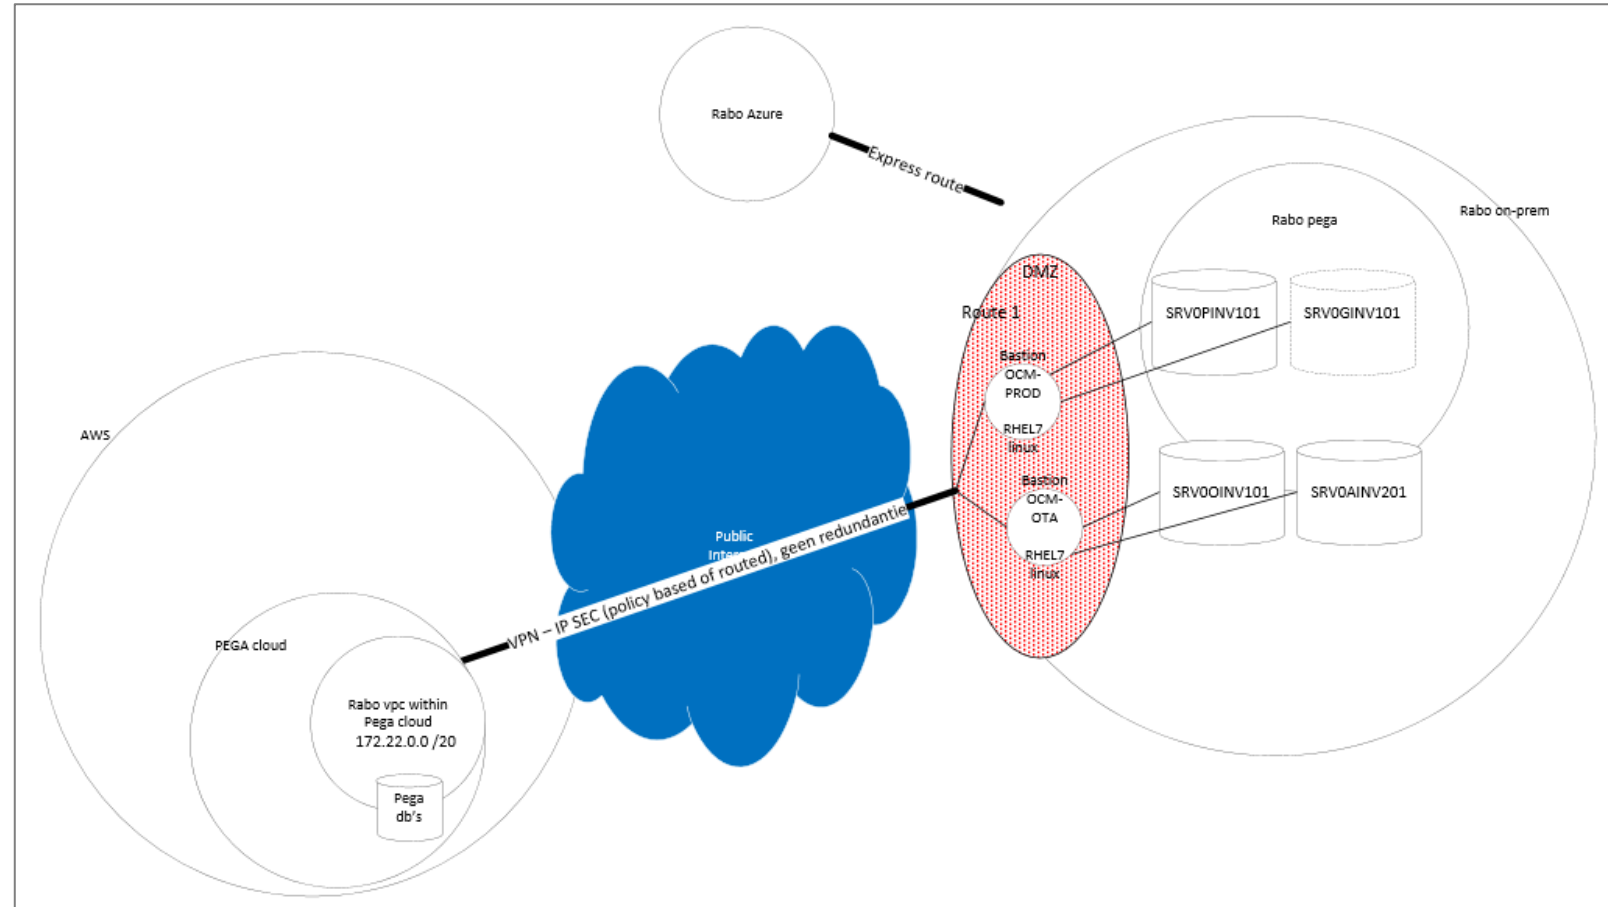

Connection test

Shadowrun with process onboarding

Data Migration

- Rabobank Payments Pega Cloud VPC with reserved IP space
- VPN setup through public internet connected to DMZ route
- Connect to dedicated Oracle Connection Manager specific to the environment
- Access to Rabobank Pega on-prem environment

Future state

Pega Cloud Live

Optimisation - User Journey

- **Leverage technology** to identify exceptions, generate alerts and automate repairs and reprocessing
- **Reduce cost per investigations** of the case types based on an agreed criteria
- **Make complex processes simpler & cost efficient**
- Map the **PEGA SI user journeys** with upcoming infinity adoption
- Seamless user experience combine with **Pega case management** through stateless **interpreter DX**

*Thank you for
your attention*

Optimisation – User Journey through DX

- A centralized web component “DX Interpreter” invokes the APIs exposed on the API Gateway
- Reuse Rabobank defined authentication mechanism for Customer, Employee or Visitor – In this scenario it will mostly be Employee authentication
- Usage of API endpoints on gateway – based on authentication mechanism chosen
