

Pega for Automated Enterprise Risk Management

Accelerate your digital transformation with automated risk management

Defense agencies are responsible for assessing, mitigating, and remediating risk while ensuring compliance with mission support reporting and controls. But too often they're up against hard-coded legacy systems, disparate manual processes, and a lack of integration and visibility across functions.

The solution is Pega for Automated Enterprise Risk Management, delivered by srcLogic.

Pega for Automated Enterprise Risk Management is a powerful, unified platform that simplifies and streamlines the entire risk management process, including those addressing internal controls, operations, acquisition and procurement, logistics and supply chain, and cybersecurity, to help agencies ensure compliance, improve visibility, reduce risk, and achieve readiness targets.

The srcLogic team brings deep experience in defense risk management and remediation, and Pega implementation. They take the time to listen to client needs and then rapidly deliver applications that not only fit the way you work now, but can flex and adapt as your demands change.

Evolve to integrated, automated risk management with Pega

Pega provides a centralized, enterprise-wide system that eliminates silos and inefficient, duplicative manual processes. With a single platform that can access and aggregate data from multiple sources and an integrated system for all risk management activities, staff can spend less time chasing down information and more time on their core mission.

- **Seamlessly integrate your systems and processes.**

Pega's unified, omni channel platform crosses the operational ecosystem, connecting multiple systems supporting various stakeholders. Intelligent automation, robotics, digital case management, decisioning, and visual design tools are all included, along with a robust set of data models, portals, dashboards, and other accelerators.

- **Streamline issue resolution and remediation.**

With Pega, it's easier for agencies to track, report on and resolve issues in a timely, transparent fashion.

- **Future-proof your organization.**

The Pega solution can be easily modified in response to your complex, ever-changing operational and financial environment.

Challenge

The U.S. Department of Defense (DoD) has been tasked to identify, assess, and mitigate risk to achieve readiness. Manual, duplicative processes combined with aging legacy systems require thousands of hours that could be repurposed for core mission support. Further, paper processes and spreadsheet-based data collection don't enable timely insights to assess and report on risk.

Solution

Pega for Automated Enterprise Risk Management, delivered by srcLogic, is a low-code, intelligent automation platform for identifying, managing, and mitigating risk across the enterprise. Integrated risk management, auditing, reporting, analysis, and resolution tracking capabilities surface the information you need to exercise your judgment and advance your mission.

Why choose Pega and srcLogic?

- Pega for Automated Enterprise Risk Management and srcLogic deliver a powerful, proven approach to risk management: a low-code, intelligent risk automation platform implemented by experienced consultants with deep expertise in risk management for government, including for the Department of Defense.
- With the Pega Platform, the srcLogic team can quickly deliver integrated risk management, reporting, analysis, and resolution tracking capabilities that are tailored to the specific functional requirements and needs of your organization and easy to modify as those needs change.

Pega puts IT and end-users on the same team

Pega's unique, model-driven development technology eliminates the hard-coded programming that makes traditional applications difficult to build and harder to change, and with specialized delivery partners like srcLogic, can demonstrate the art of the possible to customers

- With Pega, business and IT users can collaboratively build applications together with model-based design, ensuring the final solution meets end-user needs.
- When requirements change, you can truly be agile, respond quickly, and stay up-to-date. No need to depend on costly code changes for every modification.
- Pega solutions easily adapt to diverse regulatory requirements, inputs, policies, and geographies.

Reusable architecture means you don't have to reinvent the wheel

Pega for Automated Enterprise Risk Management uses a layered, reusable architecture that captures the complexity of your organization, allowing you to reuse common assets for significant time and cost savings.

- No need to start from scratch each time you build an application for a different process or function.
- Reuse the relevant assets and easily customize as needed for specific process needs.
- Easily modify applications as needed without having to start again from square one.

Proven leadership and expertise

Pega is consistently ranked by analysts as a leader in case management, intelligent business process management, and digital process automation. srcLogic is a Gold implementation partner specializing exclusively in Pega implementation services, with 100% Pega Certified, US-based consultants.
