Business case

Simplifying Complexities of Physician Clinical Review (PCR) Process

Business problem – legacy PCR process challenges and impact

- The legacy PCR assessment process was overly complex and manual, relying on multiple sources to capture and track information, which makes it time-consuming and reduces productivity.
- The lack of real-time visibility and alerts creates confusion and delays decision-making, while manual physician assignments further slowdown the workflow.
- The current process (and lack of technology) is not scalable, limiting growth and the ability to meet increasing demand.

- Extensive human intervention, slowing down workflow and decision-making

- Manual reviews and approvals, reducing productivity

- High-cost, skilled resources remain underutilized

- Limited focus on strategic activities hampers long-term organizational growth

- Manual processes increase the likelihood of errors and potential compliance misses

- Reliance on manual data lookup across systems leads to inefficiencies & delays in decision-making

- Manual tracking of WIP tasks against TAT delaying workflows & complicates escalation management

- Lack of automated alerts or task reprioritization hampering efficiency and timely adjustments

Key tenets leveraged to deliver the solution

Post assessment, Virtusa developed a **consultant driven strategy and leveraged Pega capabilities** to help Prime Therapeutics improve their existing clinical review process, resulting in enhancing security, speed to market and overall improved user experience

Initial Assessment

- Leveraged **Pega Blueprint** for initial requirement gathering, to help define business requirements and workflow

Automation of Key Processes

- Automated physician profile management, peer-to-peer (P2P) discussions and case reviews leveraging **Pega Case Management** enabling pharmacists to track case progress effectively and ensure completion according to predefined rules and timelines.

Enhanced Scalability & Security

- Migrated to Pega Cloud** enhancing scalable infrastructure, bolstering security measures, and optimizing cost-efficiency

Accelerated Implementation

- Pega Constellation** accelerates development by providing a unified, modern user interface combined with the **low-code capabilities of Pega App Studio**, enabling **faster time to market** through streamlined workflows, improved collaboration, and reusable components.

Customizable & Adaptive Solution

- The customizable solution **adapts to the evolving needs, ensuring seamless integration** for smooth data flow, resilient error handling, and reusable components

Seamless User Experience

- Self-guided processes** help streamline the learning curve, allowing users to intuitively navigate the system without constant reference to documentation

Delivery highlights

The project was structured into phases: Discover, Development & Test, Hardening, UAT, Go-Live, and Warranty & Transition, ensuring timely progress

Adaptation to Complexity

- Working with Pega and Virtusa, we were able to successfully respond to adjustments in the project through effective governance

Innovative Development

- The team successfully leveraged **Pega Constellation UI, App Studio Low-Code platform**, completing development and tested within sprints by using testing automation and security testing

Re-usable Architecture

- The Pega Layer Cake Architecture** facilitated the development of a reusable application framework that supports seamless future scalability

Successful Deployment

- PCR Automation application** was deployed on schedule and within budget, meeting all desired outcomes

Impact

Timely Delivery

- Consistent milestone achievement ensured the project stayed on track*

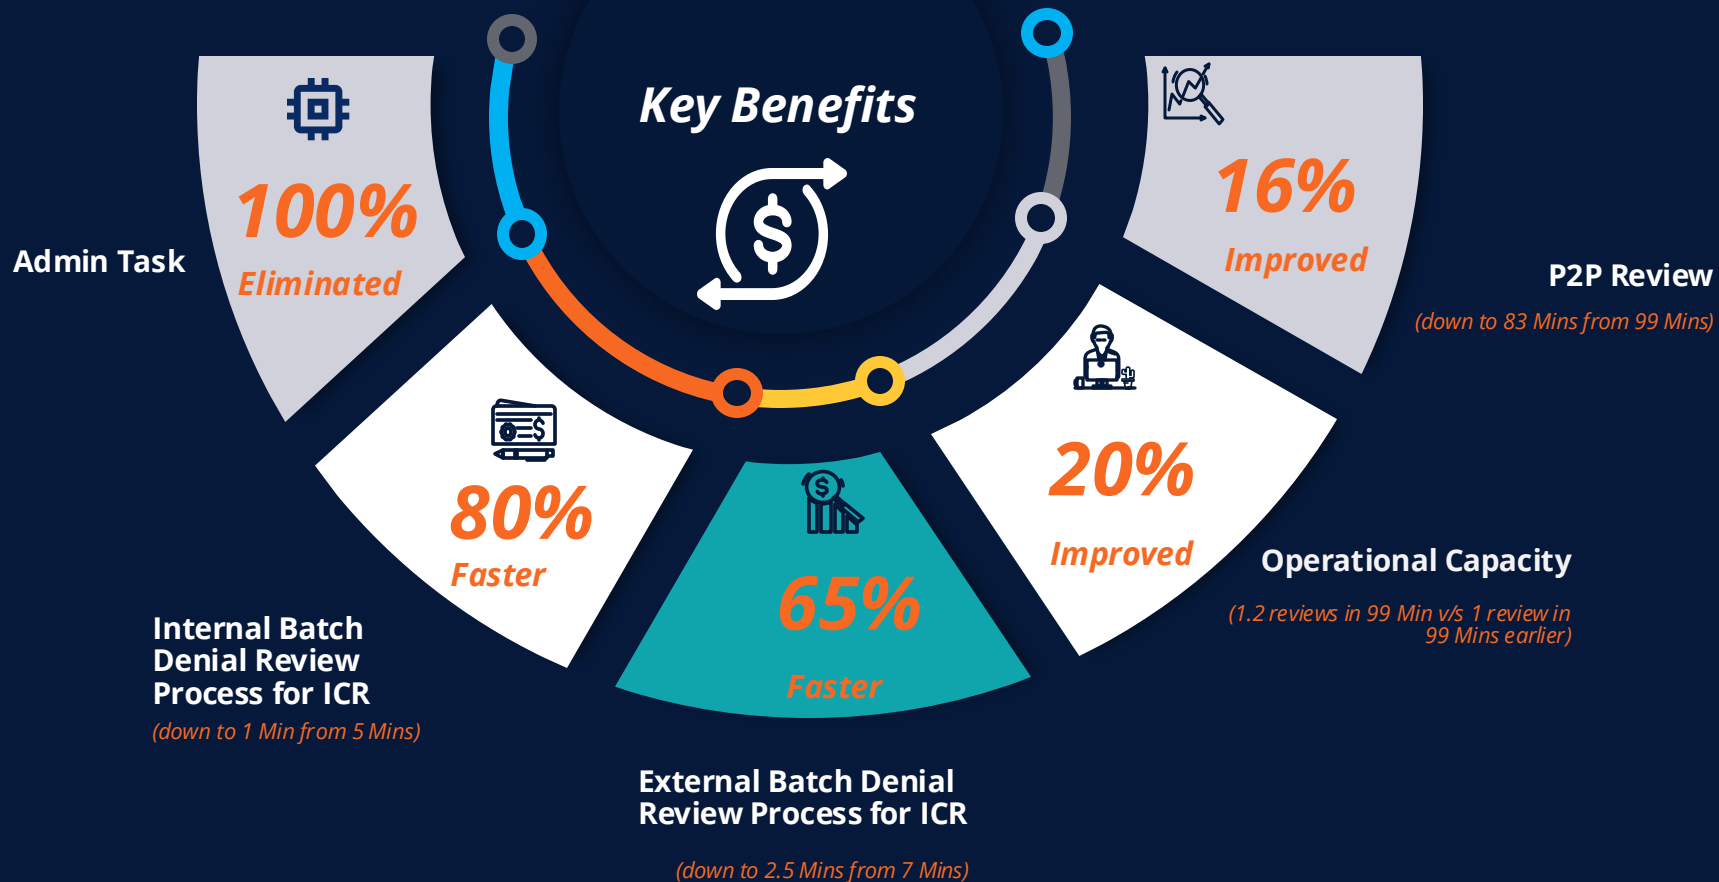

Budget Management

- The project was completed within budget, reflecting effective financial planning

Quality Assurance

- Pega Advisory Services provided continuous consultative support
- Streamlined testing minimized defects and vulnerabilities, ensuring a robust application

What our users are saying about the...

PCR automation application

Leveraging Pega capabilities

"*I love it personally and saves so much time* on MRloA submissions and batch work. Cannot say enough about what was built. You guys crushed it with this build".

"The impact on my day is that it *takes significantly less time with the PCR app*".

"*Application is great*, can tell a lot of work went into that".

"*Definite improvement* over the previous process."

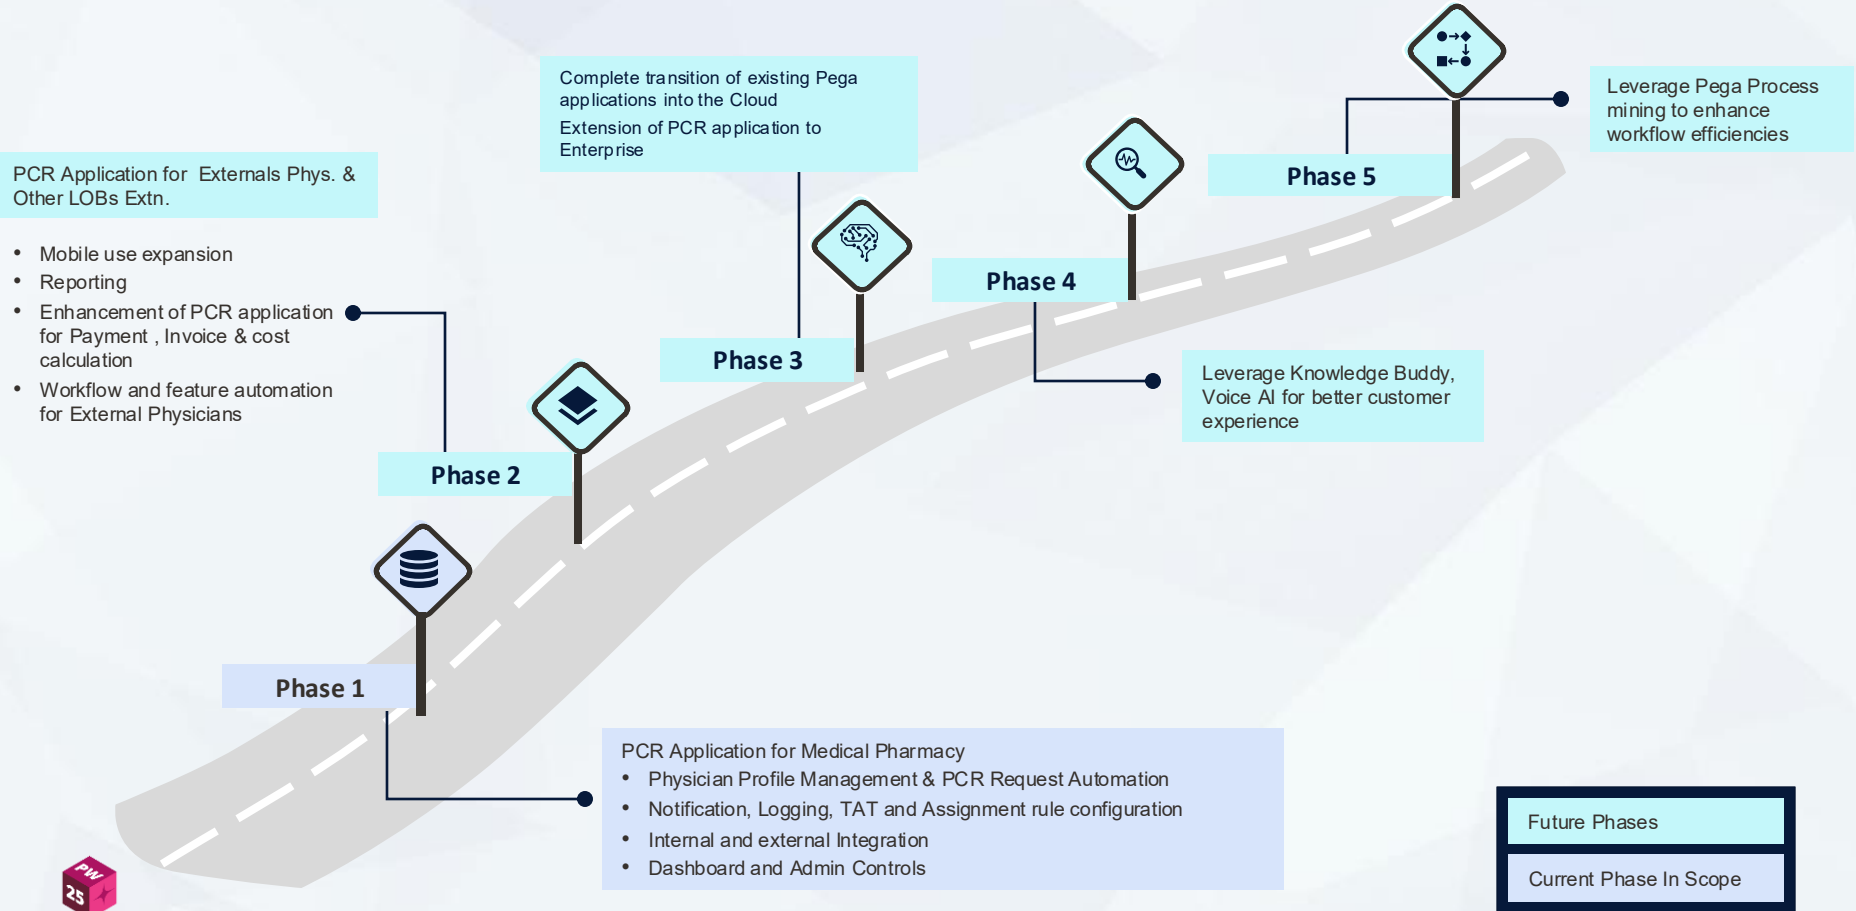

"It has been *great and a very useful tool; proven to be a benefit*. There is less stress in scheduling P2P and it has taken a huge load off".

"I think overall *it is saving time, especially in regard to helping alleviate email burden*. Not having all the batch emails to sort through has been a big-time saver".

High level future road map for prime therapeutics

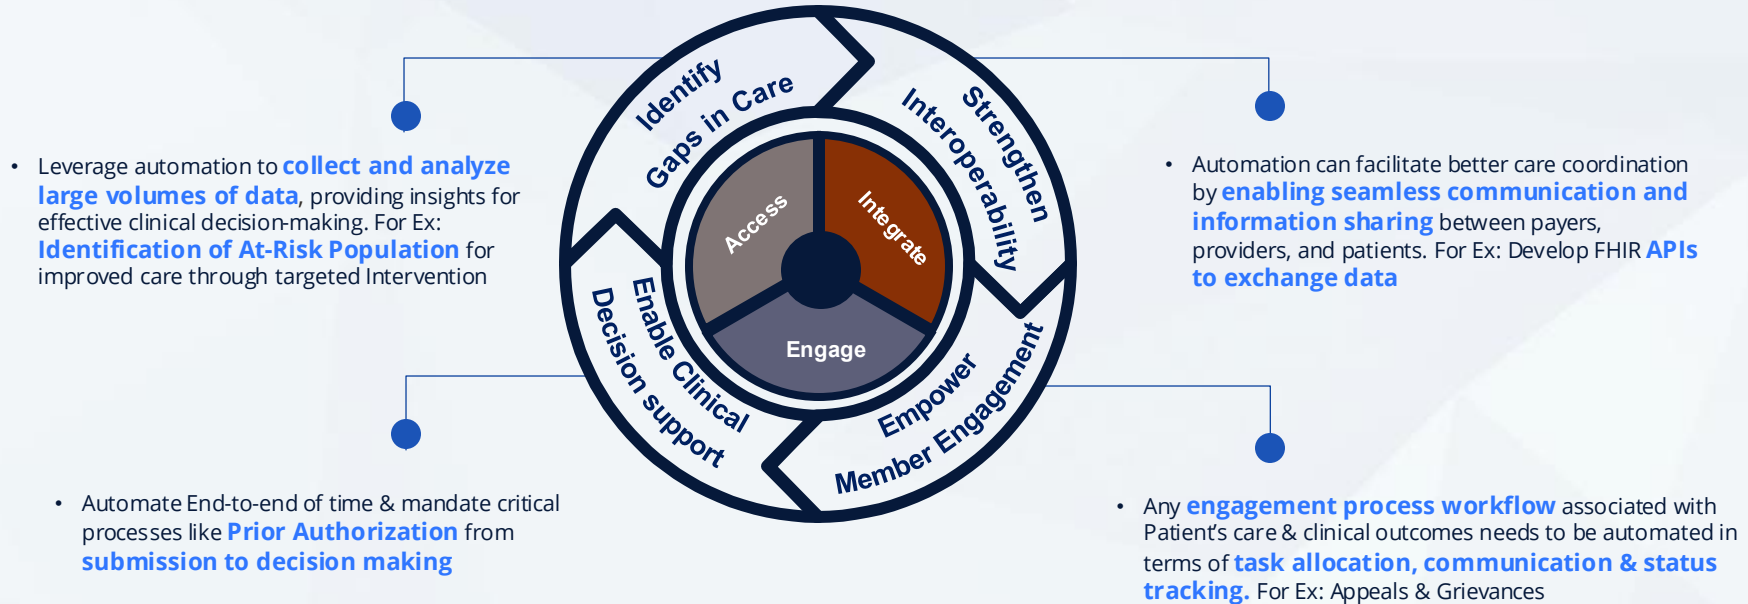

POV & assets

Clinical automation

PBMs and Payers need to empower their value chain with *efficient clinical workflows and effective decision-making aiming high-quality patient care*

Virtusa Prior Authorization with GenAI

PEGAWorld.COM

PegaWorld

JUNE 1-3, 2025 | LAS VEGAS

Transforming patient lives: Next-gen technology solutions & frameworks for healthcare companies

Digital Prior Auth

Automates and streamlines PA processes leveraging AI models

Our electronic prior authorization **automates and streamlines your PA processes for better clinical outcomes**, reduced costs, and improved business growth

Key Features

- **Seamless integration** of payer & provider systems
- **Automated** entry of PA information
- **AI models for Clinical Decisioning**
- **Automated approvals**
- **Gen AI powered denial documentation**
- **Omni-channel** information intake

Care Gap Cohort

Focuses on successful value-based care by delivering accurate patient info.

An NLP enabled solution to help identify the Cohort who have Gap in Care and there by putting an adherence plan to help track and close the gap

Key Features

- **Cross-functional** Care Management
- Reports and Analytics
- **Patient information access** with multiple care coordinators to manage patient care
- **Integration** with various existing point-of-care and EHR software applications

ePIC Integrator

Assists in pulling patient health records from the EPIC EHR system

ePIC Integrator enhances decision-making through intelligent workflows and near-real-time health data, supporting areas like care management, disease management, and case management.

Key Features

- **Accelerate** the development of integration between Pega and EPIC EHR
- **Seamlessly connect to EPIC** and utilize the 100+ different API features offered by EPIC
- **Search, read, and write patient data** in the EPIC EHR system

Appeals & Grievances

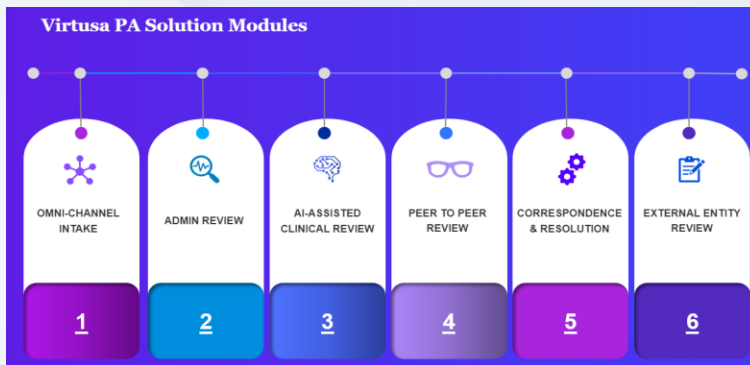

Streamline case management with automated workflows and ML

Simplifies case mgmt. with automated workflows, intuitive navigation, industry-standard classifications for faster resolutions. ML enhances decision-making, delivering smarter, data-driven insights for complex case lifecycles

Key Features

- **Comprehensive case management**
- **Predictive models** for better decisions
- **AI-based appropriate classifications, ensuring accelerated case resolution**
- Support for claims and pre-authorizations
- Automated outbound correspondence

Integrated and streamlined Prior Auth processes to enhance clinical outcomes, cost reduction, and business growth

//CODiE//
SIIA CODIE AWARDS

Virtusa Secures SIIA CODiE Awards for Best Artificial Intelligence Solution in Healthcare

Earns prestigious industry recognition by SIIA for Best AI Solution in Healthcare Next-gen Prior Authorization for Payers

GenAI powered personalized communication for denied PA

Leading edge GenAI powered personalized letter generation to minimize appeals

CAQH

Virtusa Achieved CORE Endorser Status

For supporting CAQH COREs Mission, Collaborative industry approach and Simplification of Administrative Complexities

Virtusa has been a thought leader in envisioning touchless Prior Auth

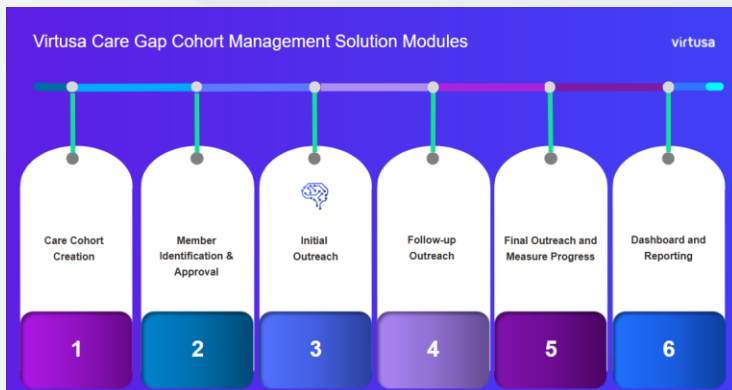

Industry Webinars

End to End Platform

to better manage the long-term health outcomes of vulnerable population

Comprehensive Member Profile and 360 Dashboards

End to End holistic Member View with Complete Health Profile and Social Determinants of Health(SDoH) Information

NLP Powered Data Insights and Enhanced Care Workflows

Identifying keywords and insights from Patient Health Data and triggering relevant intervention Tasks automatically

Comprehensive Dashboard Views

Intuitive Dashboard and Reporting to view/measure the Care Program outcome for the Cohort

Solution Capabilities

- Dynamic Urgency Management
- Efficient Data Handling
- Holistic Participant Insights
- Summarized Outreach Progress
- Comprehensive Dashboard Views & Reports
- Robust Correspondence and SLAs

Future Roadmap

-  Smart Reform Management
-  NLP Assisted Advanced Risk Scoring
-  NLP Enabled Personalized Intervention Recommendations
-  Unified Patient 360 View
-  Interactive Data Visualization
-  Predictive Analytics Integration
-  Automated Progress Reports
-  Multi-lingual Support

Virtusa prebuilt Healthcare APIs and adapters helps jumpstart client's interoperability journey
