

PEGA[®]

Supercharge your transformation

Modernize Pega for scale,
speed, and agility

Enterprises are investing more in modernizing business systems to keep pace. What was hot and hyped five years ago is in the rearview mirror. And as upgrade debt limits grow, security risks and inefficiencies flourish. Want to welcome new partners, add services, migrate to the cloud, or tackle Big Data? Your legacy systems will stand in the way of true transformation. To successfully compete, you need transparent, seamless solutions and an end-to-end ecosystem that enables agility and future-proofs your organization.

The cost of legacy systems

Legacy systems are often the bedrock of the enterprise. Likely, they once even fueled growth. But dependencies between older systems form a frail, costly, and challenging framework. And often, no one in IT knows exactly how it all works. Sustainability isn't feasible and disruptions can cause organizational pandemonium. As new devices, channels, and strategies emerge, the threat landscape for intrusion, data theft, and service disruption continues to grow. These are the costs of technical debt.

What's at stake

- **Security and compliance**

Without consistent maintenance and updates, vulnerabilities grow. And with new industry and governmental regulations around data collection and retention, noncompliance becomes a million-dollar Achilles' heel.

- **Efficiencies and stability**

Archaic systems can slow down productivity and contribute to process bottlenecks. There's also the added cost of training staff to use outdated tech.

- **Insights and analytics**

Robust reporting and data insights are table stakes. Without them, mission-critical business decisions cannot be made. As flexibility and agility drive business outcomes, you need insights in order to scale.

The benefits of modernization

One predominant driver of modernization is the need to align IT with business and customer demands. By migrating to Pega Cloud® and adopting an as-a-Service-based approach to the platform and software, you can unlock agility and prevent technical debt as upgrades, patches, and maintenance are all part of the package. Instead of using resources to fight an aging system, you can invest in research and development, adding value to your business. And with our Center-out™ approach to business architecture, modernizing with Pega can bridge the gap between data and processes, and the experiences you want your team – and your customers – to have.

Pega's modernization program bridges the process gap so you can:

- **Drive efficiency**
- **Keep pace with customer demands**
- **Propel positive outcomes**
- **Deliver peace-of-mind security**
- **Build powerful low-code apps**
- **Reduce costs**
- **Orchestrate work seamlessly**
- **Empower your teams to get work done**
- **Unify your people, processes, and technology**

"We were able to take all those wants and needs, plus future vision, and lay out a brand-new foundation for the organization."

– Stephen Smith
Information Officer, AEGIS Insurance Services

Who's modernized?

Lloyds Banking Group is the largest financial services organization in the U.K. **migrated 25% of all applications** to Pega Cloud and reduced one division's credit card dispute handling to 30 seconds per case.

Motors Insurers' Bureau (MIB), which compensates victims of uninsured motorists in the U.K. uses Pega and design thinking to **accelerate app deployments by three weeks**.

**Don't miss out.
Max out.**
